Set ı	up the coding environment	1					
Wra	ngle the data	1					
Repo	ort the summary	2					
List	of Tables						
1	Summary of Total Nitrogen	2					
2	Another summary of Total Nitrogen	2					
Set up the coding environment							

Wrangle the data

The raw dataset has 2406 rows and 14 columns.

```
#Subset columns and rows
nutrient_data <- nutrient_data_raw %>%
    select(-c(lakeid,depth_id,comments)) %>%
    filter(depth == 0) %>%
    drop_na()

#Compute summary stats for total nitrogen
nutrient_data_tn <- nutrient_data %>%
    group_by(lakename) %>%
    summarize(
        mean_tn_ug = mean(tn_ug),
        min_tn_ug = min(tn_ug),
        max_tn_ug = max(tn_ug),
        sd_tn_ug = sd(tn_ug)
)
```

Report the summary

Table 1: Summary of Total Nitrogen

lakename	mean_tn_ug	min_tn_ug	max_tn_ug	sd_tn_ug
Paul Lake	368.7564	45.67	628.625	106.3474
Peter Lake	561.8752	219.72	2048.151	305.6491

Table 2: Another summary of Total Nitrogen

lakename	mean_tn_ug	$\min_{tn}ug$	max_tn_ug	sd_tn_ug
Paul Lake Peter Lake	368.7564 561.8752	$45.67 \\ 219.72$	$628.625 \\ 2048.151$	106.3474 305.6491
